

## Press release

### **Enjoy the flow dynamic material flow control solutions and smart, integrated robotic applications**

Since the summer of 2022, HÖRMANN Intralogistics has been combining its decades of experience and core competence in automation and IT, not to mention its experience as general contractor in the construction of turnkey material flow solutions. Our broad portfolio includes tailor-made intralogistics concepts using smart robotics, innovative conveyor technology and the HiLIS Modular Warehouse Management System, as well as lifecycle support and service.

With numerous other AutoStore® systems and extensions that have been put into operation, under the direction of Robert Heinz this business area is making a strong contribution to the success of HÖRMANN Intralogistics.

There are many more exciting projects in store for 2023. In the e-grocery segment, we'll be implementing the first AutoStore® system with combined chilled and room temperature storage areas, as a micro-fulfilment solution capable of up to 12,500 picks per day.

At the Mayr-Melnhof Holz Group in Leoben (Austria) we'll see the Go-live of a modern, future-oriented intralogistics solution with an automatic 3-aisle high-bay warehouse, plus conveyors and handling technology for timber, from the production connection to fully automatic storage in the HBW, packaging, squared timber reduction, stacking and semi-automatic truck loading in sequence.

A customer-specific material flow concept for a repair centre for a market leader in the cleaning systems and products sector will also be realized by the summer of 2023. HÖRMANN Intralogistics solved the difficult task of designing the automatic small items warehouse and conveyor connections for a wide variety of item formats, developing one special conveyor solution, capable of transporting and distributing delicate items without load carriers, by using belt conveyors to avoid any interference.

In Upper Austria, a well-known manufacturer of premium heating solutions is developing a new, holistic intralogistics solution with an automatic high-bay warehouse (pallet shuttle), small parts warehouse, pallet warehouse and manual storage areas, in addition to comprehensive conveyor technology, a driverless transport system and a connected picking zone, all controlled and managed by HiLIS.

## Press release

"We look forward to the challenges and are certain that our technical know-how, competence as system integrator and our team of motivated, creative specialists will be implementing the best, future-oriented and economical complete intralogistics solutions for all our customers" comment Steffen Dieterich (Munich), and Martin Lippitz (Graz).

At the LogiMAT trade fair, along with the main stand, the additional Experience-Area on the gallery in Hall 1 offers hands-on intralogistics experience. The installation of two different large and small parts storage areas with connecting moving rack technology, conveyor technology and pick-by-robot picking offers a tangible demonstration of integrated intralogistics. Enjoy the Flow with HÖRMANN Intralogistics.
